# Safety First, Always

- Construction Site Dozer Accident

## Do It the Safe Way

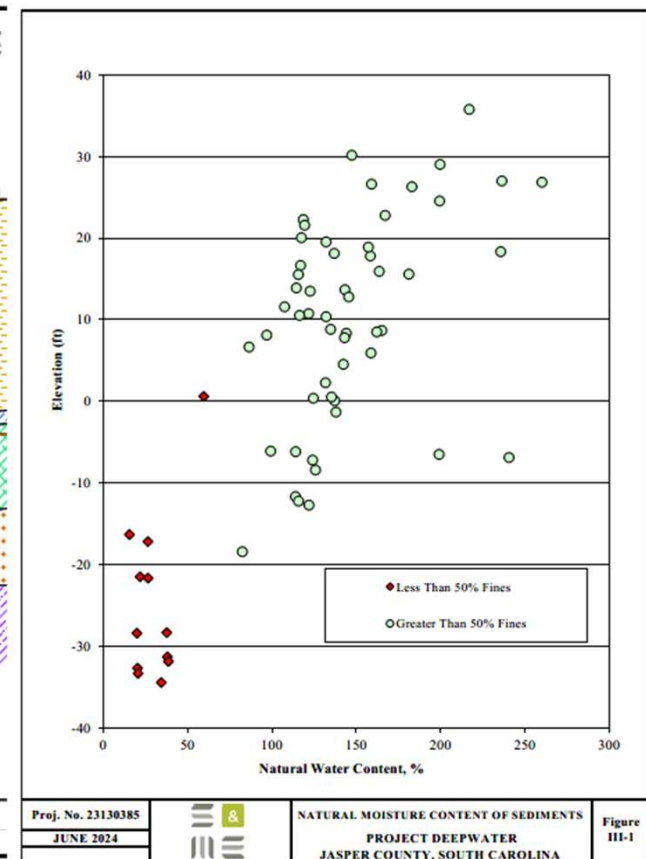

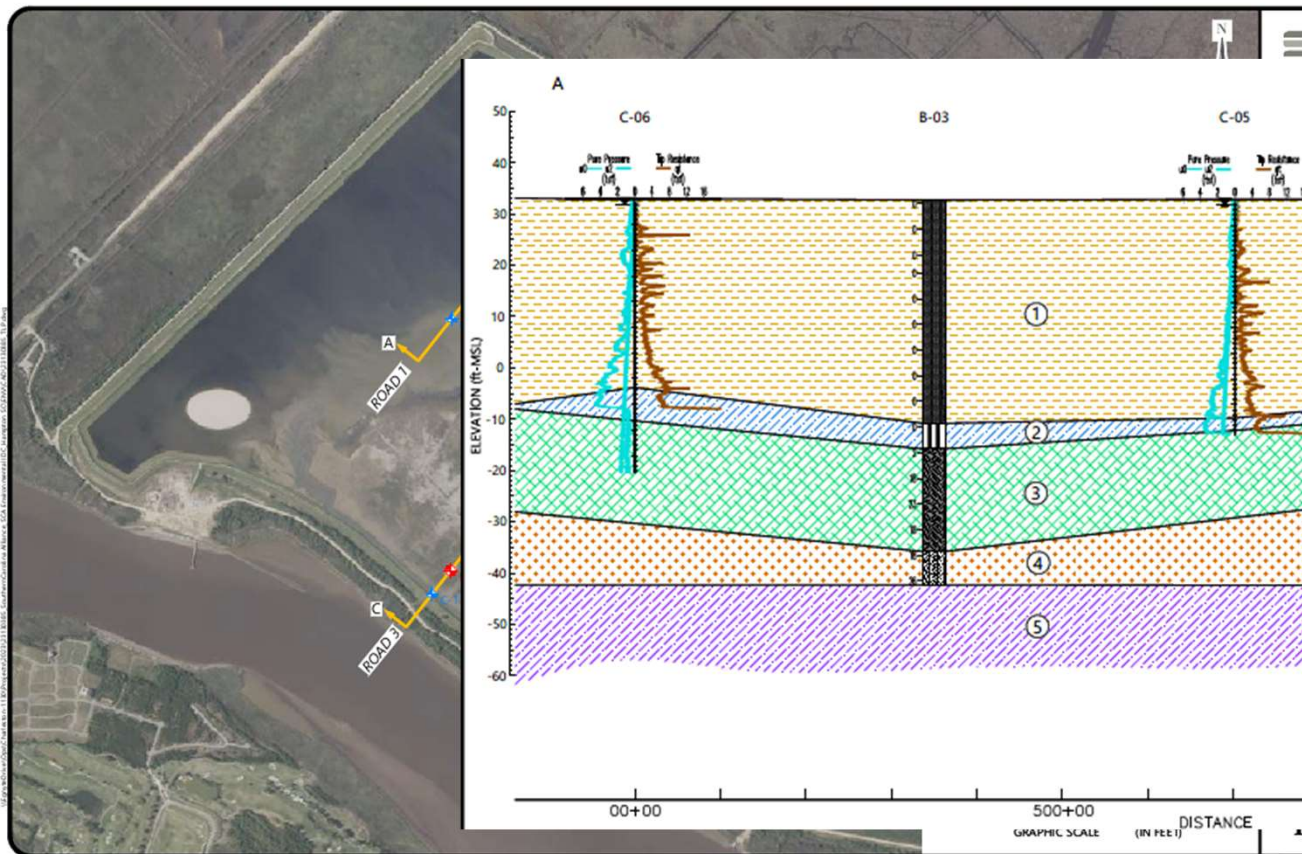

Each of us get the feeling of being rushed or hurried (time pressure trap); or, we feel complacent and take shortcuts that are not safe and may cause us to have an injury. You know these feelings – you’ve probably had to make that decision about a shortcut in the past.

We tend to fool ourselves sometimes and think it will only affect us. However, the risks we take can impact our co-workers, our family, our friends, and the community in ways that may not be obvious or have not occurred before. Do not give in. Do it the safe way everytime.
